WHEREAS, Multiple Sclerosis (MS) is a chronic, often disabling disease that attacks the central nervous system, which is comprised of the brain, spinal cord, and optic nerves. WHEREAS, the cause of MS remains unknown; however, having a first-degree relative, such as a parent or sibling, with MS significantly increases a person's risk of developing the disease. According to the National Institute of Neurological Disorders and Stroke, it is estimated that there are approximately 250,000 to 350,000 persons in the United States who are diagnosed with MS. This estimate suggests that approximately 200 new cases are diagnosed each week; and

(2) Developing strategies to provide persons with MS greater access to various treatments and other therapeutic options that may be available; and

BE IT FURTHER RESOLVED that the Task Force shall consist of the following members:

BE IT FURTHER RESOLVED that the staffs of Senate Research, House Research, and the Joint Committee on Legislative Research shall provide such legal, research, clerical, technical, and bill drafting services as the Task Force may require in the performance of its duties; and
