# **Financing Missouri's Public Elementary & Secondary**

## **Schools:**

### ***Final Report***

## **PART I**

### **EXECUTIVE SUMMARY & OVERALL CONCEPT**

Pursuant to the charge by the Joint Interim Committee on Education of the Missouri General Assembly, R. C. Wood & Associates have examined the current methodology for distribution state and local funds for public education in the state of Missouri. This report is designed and presented in the following sections:

Section I An executive summary and overview of the report's findings and overall recommendations

Section II A presentation of actual data analysis

Section III An overview of a conceptual framework regarding the policy issues of efficiency for public elementary and secondary education for the state of Missouri.

Section IV A discussion and examination of the history and analysis of education finance court cases, and  
Section V Appendix regarding formulas.

This report is designed to present as much useful information as possible in the most concise manner by way of statements and relevant observations. Given, the extreme timelines necessary to gather, analyze, and produce this report only the germane and relevant policy issues are presented. In this manner we are able to offer a number of suggestions regarding the present education finance distribution formula. As charged by the Committee, these suggestions are in attempt to increase the equity and the adequacy of the present formula.

The long-term goal would be to move from the largely tax rate driven distribution formula to a methodology of distributed state financial assistance to school districts based primarily on a cost/need student driven methodology. Thus, in this manner, over time, school districts would receive state moneys based on a cost adjusted general education aid per pupil. In the future, this would be determined based on a basic (median) cost. The cost of achieving desired performance outcomes in a district of average characteristics would be determined over time. For purposes of clarity the investigators refer to the first year of the “new” formula as Year 1. In a phase in period of three to five years these cost adjustments would include such items as:

- Student Needs
  - Economic Disadvantage
  - Language Proficiency Status
  - High Incidence/Low Severity Disability
- School District Needs
  - Economies of scale & sparsity
  - Geographic variations in competitive market prices (teacher wages etc.)

Additionally, over time, there would be a Tier II level of school districts that would have the local option to supplement with matching aid from state (adjusted for capacity & cost).

In the overall conceptual plan as presented to this date and contained herein the investigators operated with a budget constraint of \$ 1.966 billion which was the total state aid for 2002–03. Within this major budget constraint the investigators excluded school corporations (heretofore referred to as charter districts) and the St. Louis special district. Additionally, other adjustments will be necessary assuming the legislature would wish to allocate no less moneys to Kansas City and St. Louis due to desegregation issues. These moneys are identified within the report but not, at the present, reflected in the \$ 1.966 billion allocation.

Additionally, in Part II of this report we have chosen to include distribution and analyze scenarios at 3.00/3.25/ and \$3.50. We also analyzed the issue of placing more moneys into the appropriation without

primary regard to the tax rate. All such scenarios are reflected in Part II.

It is important to note that the investigators have, for a number of education finance policy reasons began with the assumption of moving from the present tax rate driven formula with the same appropriation to a new formula which would continue to transcend over a period of three to five years into a formula that would be significantly different based on well grounded principles of education finance theory and practice.

With these parameters as well as the concept of moving toward a new formula as opposed to simply ending one formula and beginning completely fresh with a new formula the major parameters and education finance policy changes found within the new proposed formula for year 1 include:

- GTB = 151,200
- Base Levy = 2.75
- Poverty Weight = 50 percent
- Elimination of Proration factor
- Revert to 1.0 x Summer ADA (net gain = \$22 million)
- Prior year actual assessed value for local effort (net gain = \$28 million)
- Actual rather than equalized levy (net gain = \$18 million)
- Line 3,4,8,9 of deductions collected to state (net gain = \$129 million)

Other major finance policy adjustments in year 1 would include:

Redefining and recasting the concept of hold harmless is part of the year 1 concept. Under the present statutory guidelines the state of Missouri has, on average, significant numbers of school districts that remain on hold harmless, or revert back to this status from year to year. Thus, the state is prevented from having all school districts "on formula" and it is prevented from significant changes to those school districts that present greater needs. Thus, the investigators have set on a course to diminish and to redefine the concept of hold harmless. In year 1 the hold harmless concept would be for any district that would choose to be in such a status. It is assumed that each district will choose the higher of the two options, hold harmless or the year 1 formula allocation.

The hold harmless allocation would be set at retaining 95 percent of 2002–03 state aid. That is, all school districts that would qualify under the new formula for less state moneys would receive a maximum

of 95 percent of the previous year's allocation. In year 2 of the new formula, each school district, that would choose hold harmless status, would receive 95 percent of the previous year and so forth. Thus, over time, the hold harmless status would be significantly diminished. Once a school district selected to leave its hold harmless status, the school district would not be allowed to return to a hold harmless status for any time in the future. Thus, over time, all hold harmless school districts would move to the new formula without penalty.

- Net gain = \$ 53 million in year 1.

Additionally, over time, with the advent of the Year 1 poverty count, and the future years student centered based formula would benefit many school districts throughout the state and the number of hold harmless districts would diminish over time.

Additionally, certain school districts would have the opportunity to become school corporations (School Corporation is the term that was previously utilized for charter school districts). School corporations would be those districts that qualified and choose to enter this new status. To be eligible for corporation status, these school districts would:

- Receive less than 7.5 percent of the total state general aid,
- The cost of making up for the loss of state aid would be less than 20 cents of additional local levy, and
- Would be presently meeting all state testing standards.

- Net gain = \$8.75 million

It is anticipated that at the present time that only six to eight school districts would qualify. The concept is one in which the state would determine the parameters, the conditions, and the goals of such a program. Each school district would have to make a determination to apply for such status. The status would be granted for a limited period of time, e.g., three to five years. The school district would be released from all state department rules and regulations and the bureaucracy of the state. In turn, the school

district would give up its state aid. Both the state and the school district would have to agree to continue its school corporation status. Additionally, the school districts within this status would still be held to all federal laws, rules, and regulations as well as all state mandated standards for student achievement and performance. If, in fact, a district would not achieve state standards for student achievement such status could end at the end of its contract with the state.

Specific and additional components to be phased in (e.g., 3 - 5 Years)

- Categorical Funding in yr 1
  - Group 1: Categorical moneys would be folded into overall general state aid
  - Group 2: Other categorical programs would be folded into general to increase poverty adjustment in yr. 1
    - E.g., Remedial reading
  - Group 3: Place under the general overall formula. In year 1 it would be a flow thru. (Phase out/in the new formulas for each within 3-5 years)
    - Special Education
    - Transportation
    - Vocational

Additionally, it is recommended that a capital outlay formula be created in year 1. For year 1 an appropriation would be made for such a formula. During year 1 analysis and study would identify and operationalize such a formula based on the sound concepts of a capital outlay formula based on the capital outlay need of school districts and the state.

During year 1 it will be vitally necessary for the state legislature to continue to study and analyze regarding the transition toward a full student based need formula. Importantly, a statistical analysis for a "cost adjusted Tier I aid would be necessary."

- Development of a "comprehensive cost index" measuring "relative cost to achieve adequate outcomes in a school with X, Y, & Z characteristics, serving students with A, B, & C characteristics."
- Rigorous empirical analysis to determine the relative cost to each school district of recruiting teachers of comparable quality. (Housing cost indices using district level data are generally insufficient in this regard).
- Rigorous empirical analysis of costs associated with scale and sparsity (and policy considerations regarding districts small by necessity and districts small by choice).
- Evaluation of the use of U.S. Census and other Missouri economic demographic data to predict local student needs (poverty, language proficiency & mild/mod disability) rather than relying on district headcount. (Utilizing these methodologies will reduce headcount incentives that often occur in need based) aid formulas.

#### Revenues

- Move toward a consistent and valid methodology of assessing property in all school districts. Certificates of value, or some equally valid methodology, for each county would be the most logical and efficient way of addressing the issues of valid measures of local wealth. If certificates of value, or the equivalent, were initiated in all counties, this would assure the state and each community that it is paying the same taxable amount, relative to its wealth to all other communities. Conceptually, this should not significantly change the local and state share in the state of Missouri.

Further, by engaging in this action the issue would be removed as a topic of continued discussion as to the weaknesses of the present formula. It is important to note that some valid and consistent measure of local wealth be utilized in all counties to enhance the equity and adequacy of the formula.

- Over a period of time, the measure of the local ability to pay could be strengthened by moving toward a local measure of wealth based upon a combination of wealth measurement for each school district, i.e., a composite of local property assessments, local income tax, and sales tax revenue for each school district. This concept would warrant future study.
- Maximize the amount of state moneys that can appropriate for the education finance distribution formula. Connect the guaranteed tax base GTB factor with the growth (or decline) of state revenue. The GTB is set in year one of the new formula at an amount that will, given certain assumptions drive the most moneys into the most relatively poor school districts. Over time, and study, the GTB would be conceptually set at a stated amount. The GTB would then rise or fall based on the growth of state revenues and local revenues.
- Eliminate the concept of proration and the concept of funding less than what the formula calls for. The state funds what it funds and it is by definition 100 percent of the allocation.

### Deductions

- Moving significantly away from the usage of deductions. The elimination of lines 3, 4, 8, and 9 of the present formula as deductions. These moneys would be collected by the state and distributed by the state in the overall formula.
- For future study, the examination and treatment of Proposition “C” moneys in the same manner as lines 3, 4, 8, and 9 should be investigated.

### Equity Issues

- During year 1 careful rigorous analysis and examination of the efficiencies of school districts with careful policy suggestions as to have more efficient sized school districts needs to be conducted. Thus, the presences of very small and very large districts would warrant careful examination with policies for the elimination or differentiated financial aid of such non-efficient school districts.
- Move toward a semi-annual review of the basic formula as to the equity and adequacy issues.

### Future Issues

- Move from a tax-rate driven state school aid formula to a weighted pupil driven formula based on educational needs of children. In an overall concept, this as well as the specific attributes of each aspect of the formula will require future study and analysis.
- Ultimately, in order for the state of Missouri to assure equity and adequacy, the new formula would fund pupils on a weighted ADA count. ADA would be defined as those classes/days thereof of students who are enrolled in coursework as approved by the state for funding purposes. These standards would be directly connected to state assessment standards

- Begin to fashion a base student allocation for each school district based on a methodology to determine the most efficient school and best practice model.
- As a goal-increase the overall state percentage while retarding the growth of the local percentage, thus the equity of all of the numbers, over time, will tend to improve.

Section II of this report contains the basic conceptual and resultant financial issues of year 1 of the proposed changes. As a note, it is important to remember that this entire report is based on data from the current school year, e.g., enrollments, assessed valuations and so on. In that we cannot project these numbers for next year or beyond, we have chosen to run data based on a steady state model that we believe to be a reasonable and accurate projection given the limitations of this steady state. So the reader should be reminded that in reality all numbers are as close to a reasonable projection our data allows us to make.

# **Part II**

## **Missouri School Finance Policy Options Package #1 Tax Rate Plan with Option to Reinstate Line 1b Aid**

### **1.0 Overview**

Figure 1 conceptualizes our approach to modifying current aid allocations with the objectives of improving the overall equity and adequacy of the current Missouri school finance formula. Our primary objective thus far has been to determine how to raise the basic floor of opportunity, within tight state budget constraints, with minimal reduction in aid to districts.

The blue, diagonal line in Figure 1 represents the relationship between local property tax revenues per pupil and local assessed valuation per pupil. The greater the property wealth per pupil, the greater the local revenue per pupil at a given tax rate (from taxing that property). Under the current matching aid formula, an artificial basic funding level per pupil is derived from the guarantee that a \$2.75 local levy can be applied to a guaranteed wealth of \$147,022 per pupil in assessed valuation (in 2002–03 at proration = 1.0) to yield \$4,043 per pupil. Beyond the \$2.75 base local levy, additional matching aid is granted to school districts with less than the guaranteed wealth. In addition, several relatively high property wealth school districts receive “hold harmless” aid associated with aid levels prior to adoption of the current formula. State and local revenues combined yield the current total per pupil represented as a red line in Figure 1.

The state cost (from state general funds) is represented by the space between the red and blue lines. At the same total state cost, school districts at the left hand end of the distribution (low property wealth districts) can have basic revenues raised if legislators were willing to shift some aid away from higher wealth districts. We accomplish this shift with the following measures:

- Elimination of state matching aid for local levys above \$2.75

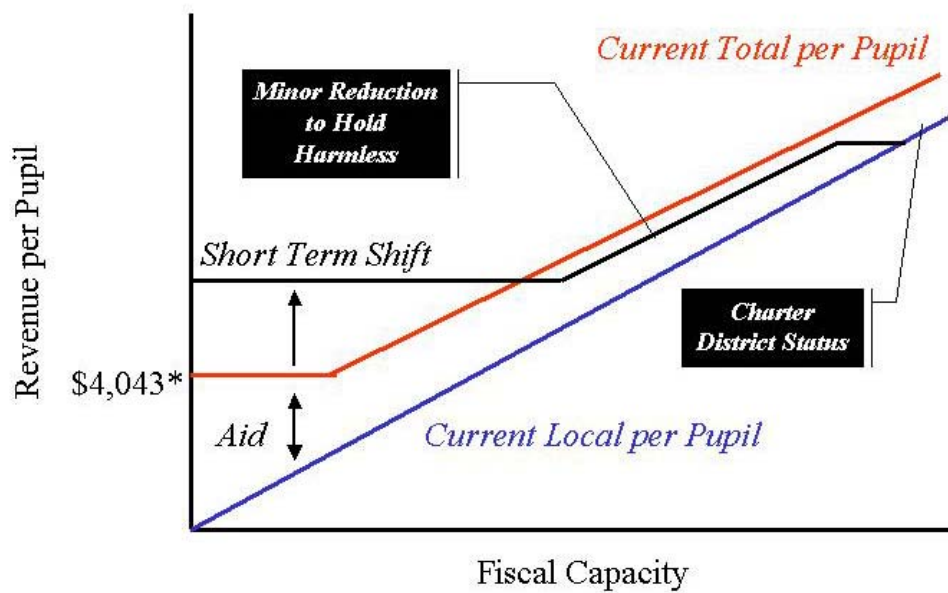

- Hold Harmless aid such that all school districts retain at least 95 percent of 2002–03 state aid (essentially retaining the majority of present matching aid for tax rates above \$2.75)
- Increasing the poverty adjustment to 50 percent from 20 percent
- A special classification system to identify high fiscal capacity districts and grant those districts regulatory freedom in turn for loss of all hold harmless aid
- Collecting lines 3, 4, 8, 9 of deductions to the state for redistribution through the formula

Additional considerations we propose include:

- Counting summer school students at 50 percent of the current rate
- Basing local effort calculations on actual prior year assessed value
- Using actual levys in place of equalized levys for all local effort calculation

Altogether these changes, which we refer to as our Base, or Basic plan produce the short term shift depicted in Figure 1. That is, the state dollars redistributed can raise significantly, the basic level of funding available to the school districts with the lowest assessed value per pupil.

**Figure 1**  
**Conceptual Approach**

\*At 1a Proration = 1.0 ( $2.75/100 \times 147022$ )

In the following series of options, we evaluate our basic option along side 3 additional options that might be implemented if more money becomes available. Because we take the rather drastic step of eliminating entirely matching aid on levys above \$2.75, the legislature might consider reinstating that aid, within limits, if new money becomes available. We test the costs and equity implications of reinstating line 1b aid with caps (at different levels) on the tax rate up to which the state will provide matching aid.

## 2.0 Formula Parameters

Table 1 provides formula parameters for our basic option and for options reinstating line 1b aid with matching aid caps at levies of \$3.00, \$3.25 and \$3.75. All other parameters are held constant.

**Table 1**  
**Formula Parameters**

<b>Major Formula Factors</b>	<b>[a] Base Proposal</b>	<b>[b] \$3 1b Cap</b>	<b>[c] \$3.25 1b Cap</b>	<b>[d] \$3.50 1b Cap</b>
GTB	\$ 151,200.00	\$151,200.00	\$151,200.00	\$151,200.00
Tier I Base Rate	\$ 2.75	\$ 2.75	\$ 2.75	\$ 2.75
Line 14b GTB				
Poverty Weight	0.50	0.50	0.50	0.50
Line 14b Poverty Weight				
Proration (1a)	1	1	1	1
Proration (1b)		1	1	1
Matching Aid Levy Cap		\$ 3.00	\$ 3.25	\$ 3.50
<b>Summer Enrollment</b>				
Percent to Reduce	50	50	50	50
<b>Local Effort Calculation Factors</b>				
Assessed Value for Loc. Eff. (1 = current law, 2 = prior year)	2	2	2	2
Actual or Equalized Levy (1 = equalized, 2 = actual)	2	2	2	2
<b>Hold Harmless</b>				
Percent of 02 - 03 Aid to Retain	95	95	95	95
<b>Charter Status</b>				
Percent State Aid Limit to Qualify	0.075	0.075	0.075	0.075
Tax Levy Limit to Offset to Quality	0.2	0.2	0.2	0.2
Number Qualify by Aid Limit	8	8	8	8
Number Qualify by Levy Limit	7	7	7	7
Number Qualify on Both	7	7	7	7

### 3.0 Costs

Table 2 summarizes the costs of our basic option along side options reinstating line 1b matching aid. Reinstating line 1b with a \$3.00 cap would increase cost by just over \$100 million. Reinstating line 1b aid with a \$3.25 cap would increase cost by nearly \$200 million and reinstating line 1b aid with a \$3.50 cap would increase cost by \$264 million. Note that each of these cost increases assume no increase in local levys, which is unlikely in a scenario where aid is being reduced in several districts.

Additional costs under each scenario include the cost of ensuring that all districts retain at least 95 percent of 2002–03 aid. As line 1b aid is reintroduced, the number of school districts that would lose aid is decreased as is the total cost of keeping school districts at 95 percent of 2002–03 aid. These “hold harmless” costs are included in the total cost estimate.

It turns out that school districts in urban areas, including Kansas City and St. Louis would be among those losing 5 percent of state revenue in an effort to raise the funding in relatively property poor rural districts. The additional costs (not included in our total cost estimate) of holding Kansas City and St.

Louis at 100 percent 2002–03 aid are approximately \$13.36 million. It might also be wise to explore the need to hold fully harmless other high need urban fringe districts in the St. Louis and Kansas City areas.

**Table 2**

<b>Option Costs</b>				
	[a]	[b]	[c]	[d]
<b>COST OUTPUT</b>	<b>Base Proposal</b>	<b>\$3 1b Cap</b>	<b>\$3.25 1b Cap</b>	<b>\$3.50 1b Cap</b>
<b>Total State Cost 2002 - 03 (for simulated districts)</b>	\$ 1,966	\$ 1,966	\$ 1,966	\$ 1,966
<b>Total State Cost with Hold Harmless</b>	\$ 2,220	\$ 2,326	\$ 2,412	\$ 2,483
<b>State Cost Less Deduction Redistribution</b>	\$ 1,976	\$ 2,082	\$ 2,168	\$ 2,239
<b>Total State Cost Less Charter</b>	\$ 1,967	\$ 2,074	\$ 2,159	\$ 2,231
 <b>Dollar Change from 2002 - 03</b>	 \$ 1	 \$ 107	 \$ 193	 \$ 264
<b>Percent Change</b>	0%	5%	10%	13%
 <b>Hold Harmless (costs included in total)</b>				
Number of Hold Harmless Districts	151	105	70	49
Cost of Hold Harmless Program	\$ 413.67	\$ 291.82	\$ 191.56	\$ 115.35
 <b>Urban Safety Valve Costs (costs in addition to total)</b>				
Cost of Protecting KC & St.Louis Against Loss	\$ 13.36	\$ 13.36	\$ 13.36	\$ 13.36

#### 4.0 Equity Output

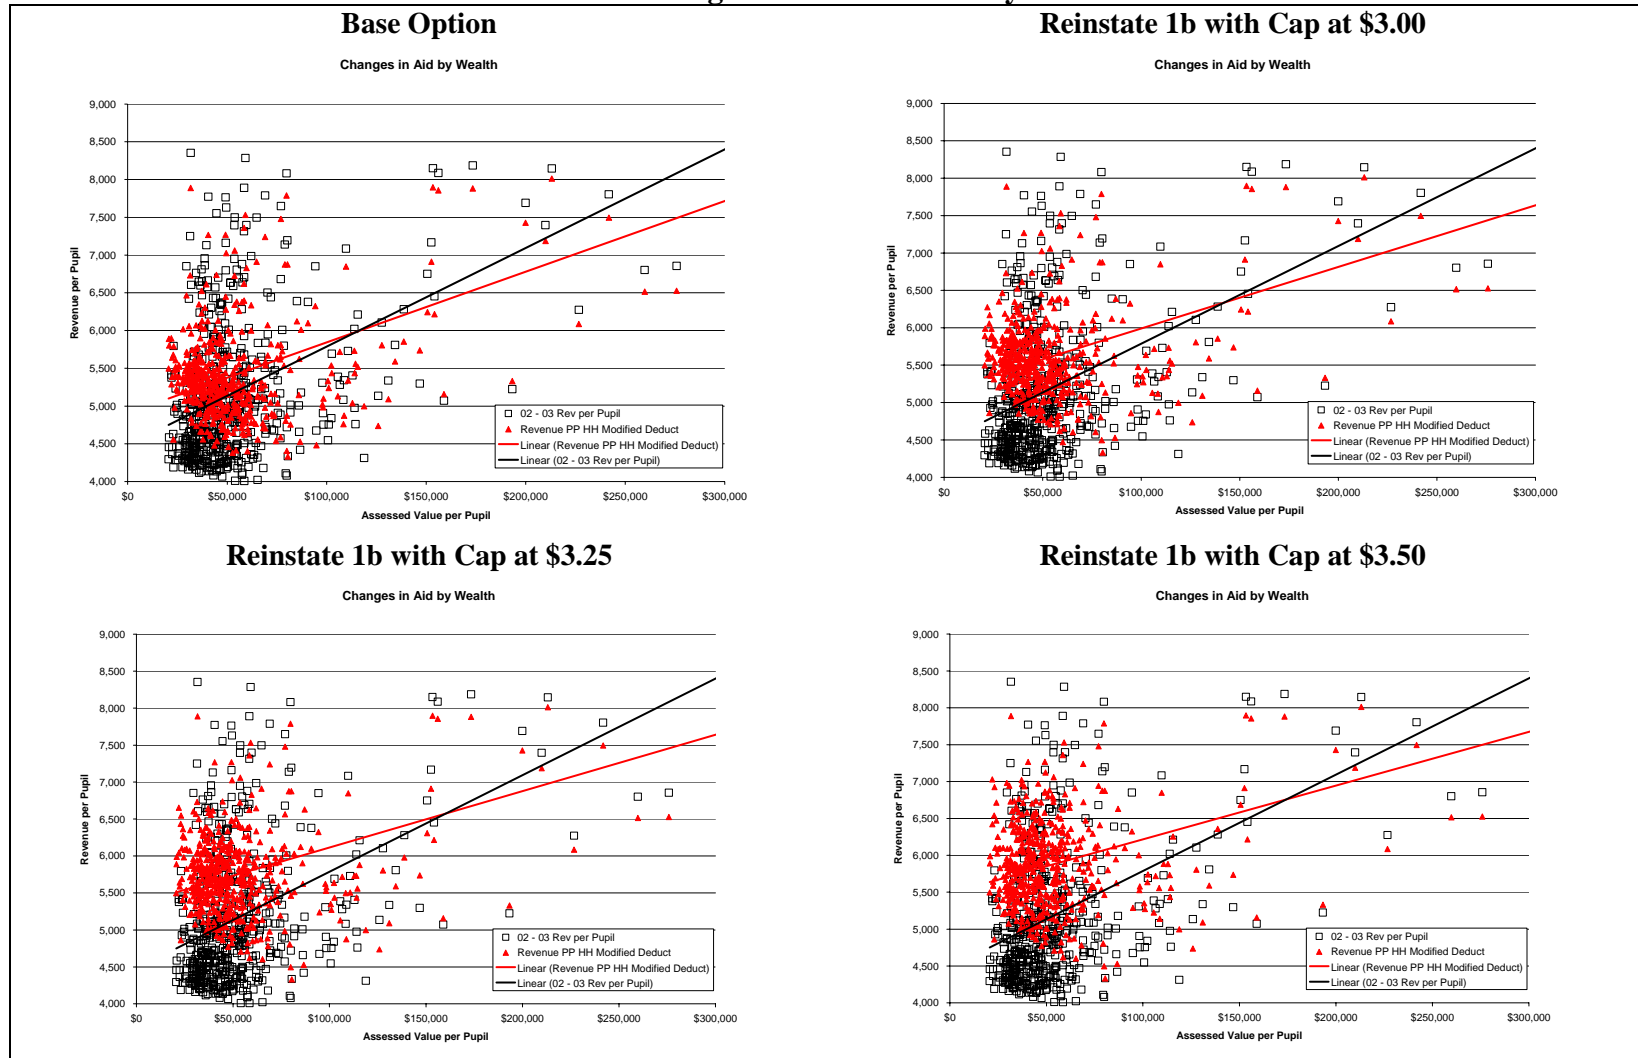

Table 3 summarizes the equity output of our basic options along size options reinstating line 1b aid at various cap levels. For starters, our basic option raises mean revenue per pupil by nearly \$80 over 2002–03 levels and reduces the coefficient of variation from 21 percent to 17 percent. Reintroducing line 1b aid with additional revenue leads to further reduction in the variance in revenues and further increases to mean revenue per pupil.

**Table 3**  
**Changes to Equity Under Options**

	[a]	[b]	[c]	[d]
<b>EQUITY OUTPUT</b>	<b>Base Proposal</b>	<b>\$3 1b Cap</b>	<b>\$3.25 1b Cap</b>	<b>\$3.50 1b Cap</b>
Mean	\$ 5,648	\$ 5,773	\$ 5,874	\$ 5,957
Stdev	\$ 984	\$ 924	\$ 889	\$ 881
CV	17%	16%	15%	15%
95%ile	\$ 7,789	\$ 7,789	\$ 7,789	\$ 7,789
5%ile	\$ 4,625	\$ 4,759	\$ 4,891	\$ 4,918
FRR	0.68	0.64	0.59	0.58
McLoone	0.93	0.93	0.94	0.93
GINI	0.09	0.08	0.08	0.08

Figure 2 provides a graphic display of the changes in revenue per pupil with respect to property wealth per pupil. As depicted in Figure 1, the basic proposal *lifts* the revenues per pupil of the lowest property wealth districts. Each additional increase in aid reinstated into line 1b leads to additional, though modest increases in revenues to low wealth districts and modest improvement to overall fiscal neutrality.

**Figure 2**  
**Changes to Fiscal Neutrality**

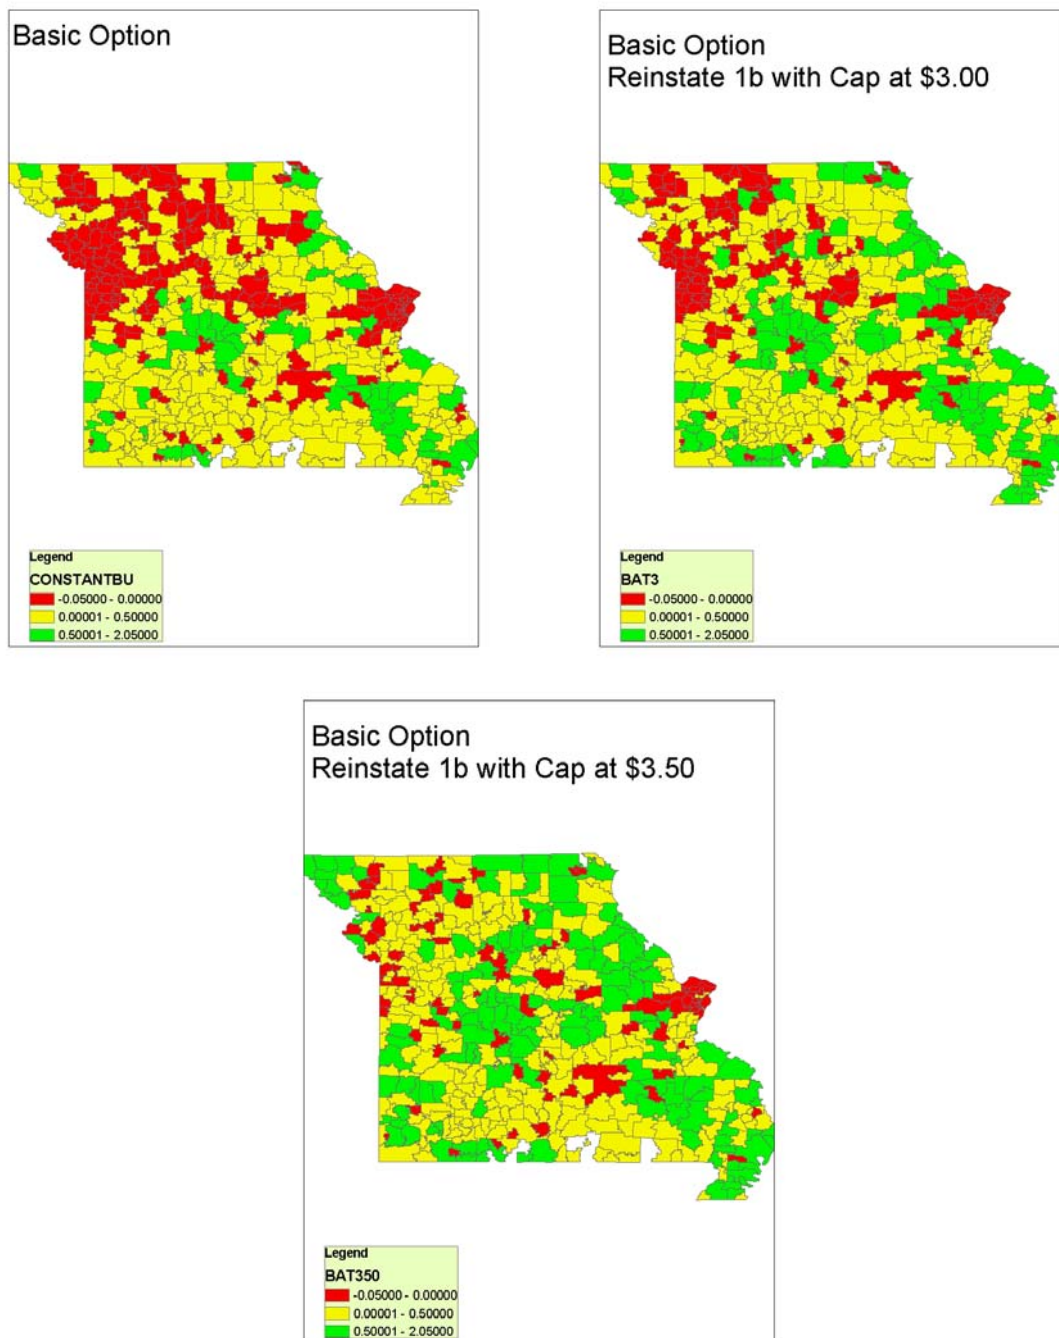

## 5.0 District Level Effects

Figure 3 displays geographically the winners and losers under our basic plan and modified plans reinstating line 1b aid with additional revenues. In general, metropolitan areas are disadvantaged by our plan to reduce matching aid on tax rates above the \$2.75 rate. That said, it is generally southern and southeastern Missouri rural areas and small towns that fair least well under the current formula, due to the relatively low assessed valuation per pupil. Under the basic option, most of rural southern Missouri would see state aid increases up to 50 percent, and many would receive state aid increases in excess of 50 percent (brighter green).

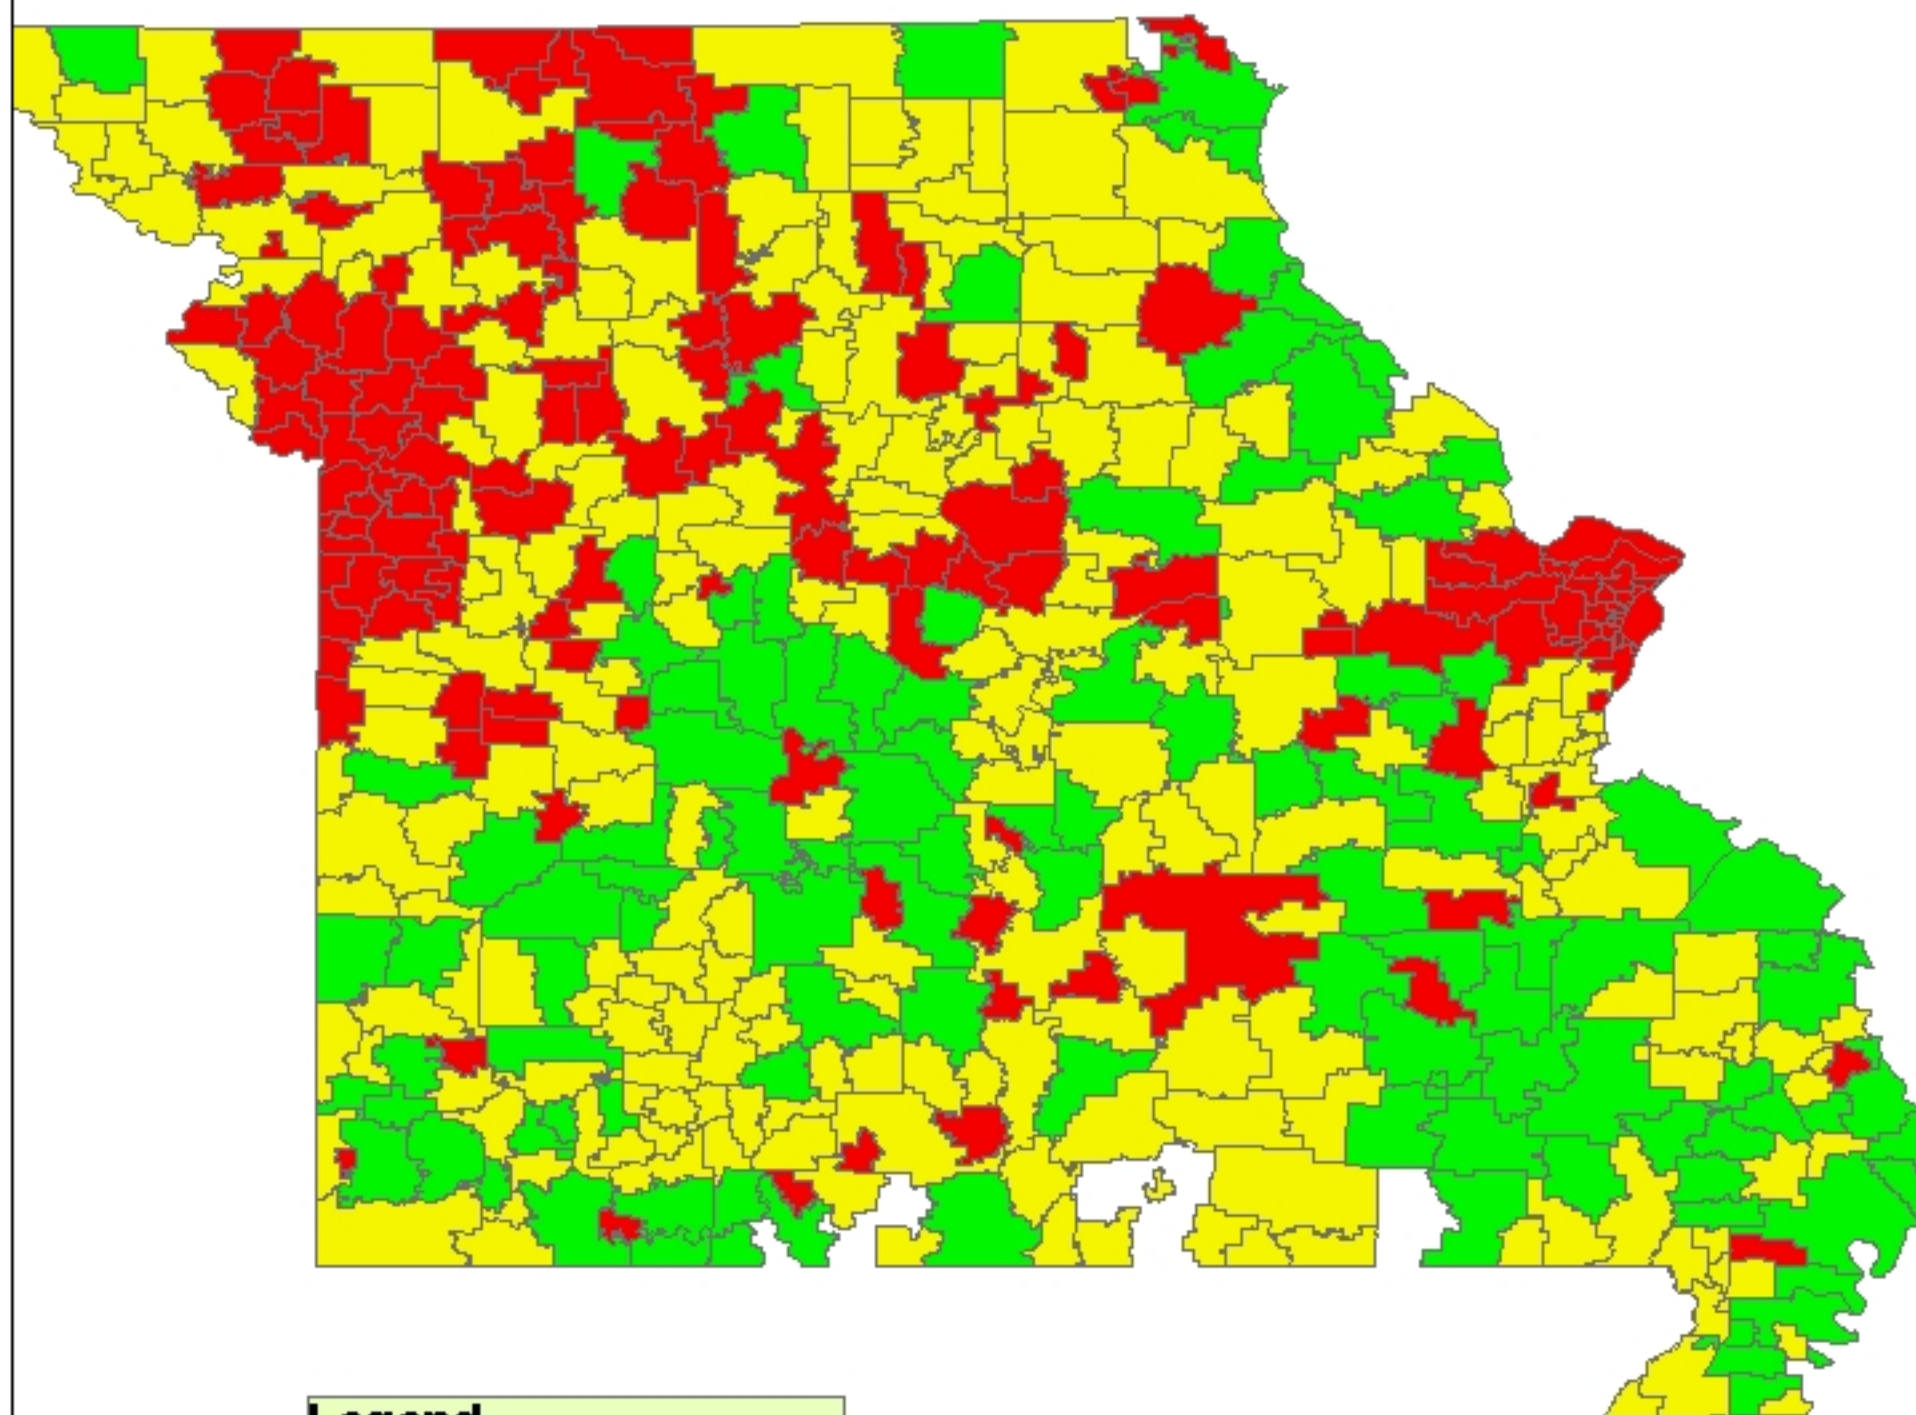

As line 1b aid is reintroduced, losses to the urban areas are moderated, especially when line 1b aid can be reintroduced with a cap at \$3.50 (bottom panel).

**Figure 3**  
**Districts with Gains (Yellow to Green) and Losses (5%) Under Basic Option & Reinstatement of Line 1b**

## **Missouri School Finance Policy Options**

### **Package #2**

#### **Plan with Option to Add New Revenue to Foundation**

##### **1.0 Overview**

Figure 1 conceptualizes our approach to modifying current aid allocations with the objectives of improving the overall equity and adequacy of the current Missouri school finance formula. Our primary objective thus far has been to determine how to raise the basic floor of opportunity, within tight state budget constraints, with minimal reduction in aid to districts.

The blue, diagonal line in Figure 1 represents the relationship between local property tax revenues per pupil and local assessed valuation per pupil. The greater the property wealth per pupil, the greater the local revenue per pupil at a given tax rate (from taxing that property). Under the current matching aid formula, an artificial basic funding level per pupil is derived from the guarantee that a \$2.75 local levy can be applied to a guaranteed wealth of \$147,022 per pupil in assessed valuation (in 2002–03 at proration = 1.0) to yield \$4,043 per pupil. Beyond the \$2.75 base local levy, additional matching aid is granted to school districts with less than the guaranteed wealth. In addition, several relatively high property wealth districts receive “hold harmless” aid associated with their aid levels prior to adoption of the current formula. State and local revenues combined yield the current total per pupil represented as a red line in Figure 1.

The state cost (from state general funds) is represented by the space between the red and blue lines. At the same total state cost, school districts at the left hand end of the distribution (low property

wealth districts) can have their basic revenues raised if legislators were willing to shift some aid away from higher wealth districts. We accomplish this shift with the following measures:

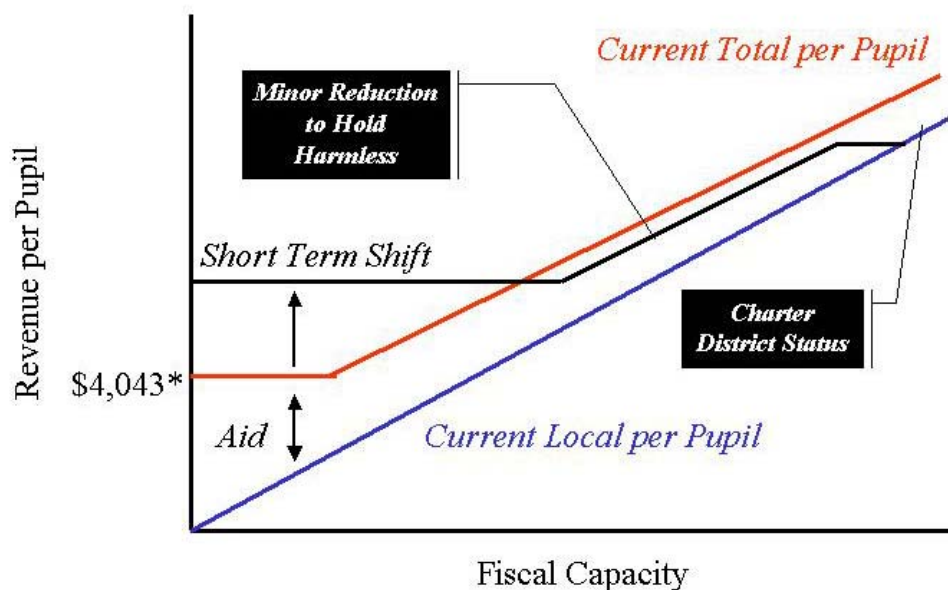

1. Elimination of state matching aid for local levies above \$2.75
2. Hold Harmless aid such that all districts retain at least 95 percent of 2002–03 state aid  
(essentially retaining the majority of present matching aid for tax rates above \$2.75)
3. Increasing the poverty adjustment to 50 percent from 20 percent
4. A special classification system to identify high fiscal capacity school districts and grant those school districts regulatory freedom in turn for loss of all hold harmless aid
5. Collecting lines 3, 4, 8, 9 of deductions to the state for redistribution through the formula

Additional considerations we propose include:

1. Counting summer school students at 50 percent of the current rate
2. Basing local effort calculations on actual prior year assessed value
3. Using actual levies in place of equalized levies for all local effort calculation

Altogether these changes, which we refer to as our Base, or Basic plan produce the short term shift depicted in Figure 1. That is, the state dollars redistributed can raise significantly, the basic level of funding available to the districts with the lowest assessed value per pupil.

**Figure 1**  
**Conceptual Approach**

\*At 1a Proration = 1.0 ( $2.75/100 \times 147022$ )

In the following series of options, we evaluate our basic option along side three other options in which we add \$100 million, \$150 million and then \$500 million to the state budget constraint.

## 2.0 Formula Parameters

Table 1 displays the formula parameters applied under our four options. Option (a), the basic proposal uses a GTB of \$151,200 and eliminates line 1b aid. As such, the basic revenue per pupil is  $.0275 \times 151200 = \$4,158$  (an increase of over \$100 per pupil over 2002 – 03 levels). The total cost of this option (for the districts in the simulation) is approximately the same as the total cost for the same districts in 2002 03. Note that we are actually simulating the effects of the policy option on the current year (2003–04) compared to last year.

Adding \$100 million to the cost of the program allows us to raise the GTB to \$158,100 yielding a basic revenue per pupil of  $.0275 \times 158100 = \$4,348$ , or a 300 increase over 2002 – 03.

Adding \$150 million to the cost of the program allows us to raise the GTB to \$161,400, yielding a basic revenue per pupil of  $.0275 \times 161400 = \$4,438$ .

Adding \$500 million to the cost of the program allows us to raise the GTB to \$182,000, yielding a basic revenue per pupil of  $.0275 \times 182000 = \$5,005$ .

**Table 1**  
**Formula Parameters**

<b>Major Formula Factors</b>	<b>[a] Base Proposal</b>	<b>[f] Add 100 Million</b>	<b>[g] Add 150 Million</b>	<b>[h] Add 500 Million</b>

### 3.0 Costs

Table 2 summarizes the costs of the options presented in Table 1. As mentioned, the basic option costs approximately the same as 2002–03 aid (1.97 billion). The other options cost \$100, \$150 and \$500 million of additional funds. Additional costs under each scenario include the cost of ensuring that all districts retain at least 95 percent of 2002–03 aid. As the GTB is increased, the number of school districts that would lose aid is decreased as is the total cost of keeping districts at 95 percent of 2002–03 aid. These “hold harmless” costs are included in the total cost estimate.

It turns out that school districts in urban areas, including Kansas City and St. Louis would be among those losing 5 percent of state revenue in an effort to raise the funding in relatively property poor rural districts. The additional costs (not included in

our total cost estimate) of holding Kansas City and St. Louis at 100 percent 2002–03 aid are approximately \$13.36 million. It might also be wise to explore the need to hold fully harmless other high need urban fringe districts in the St. Louis and Kansas City areas.

#### 4.0 Equity Output

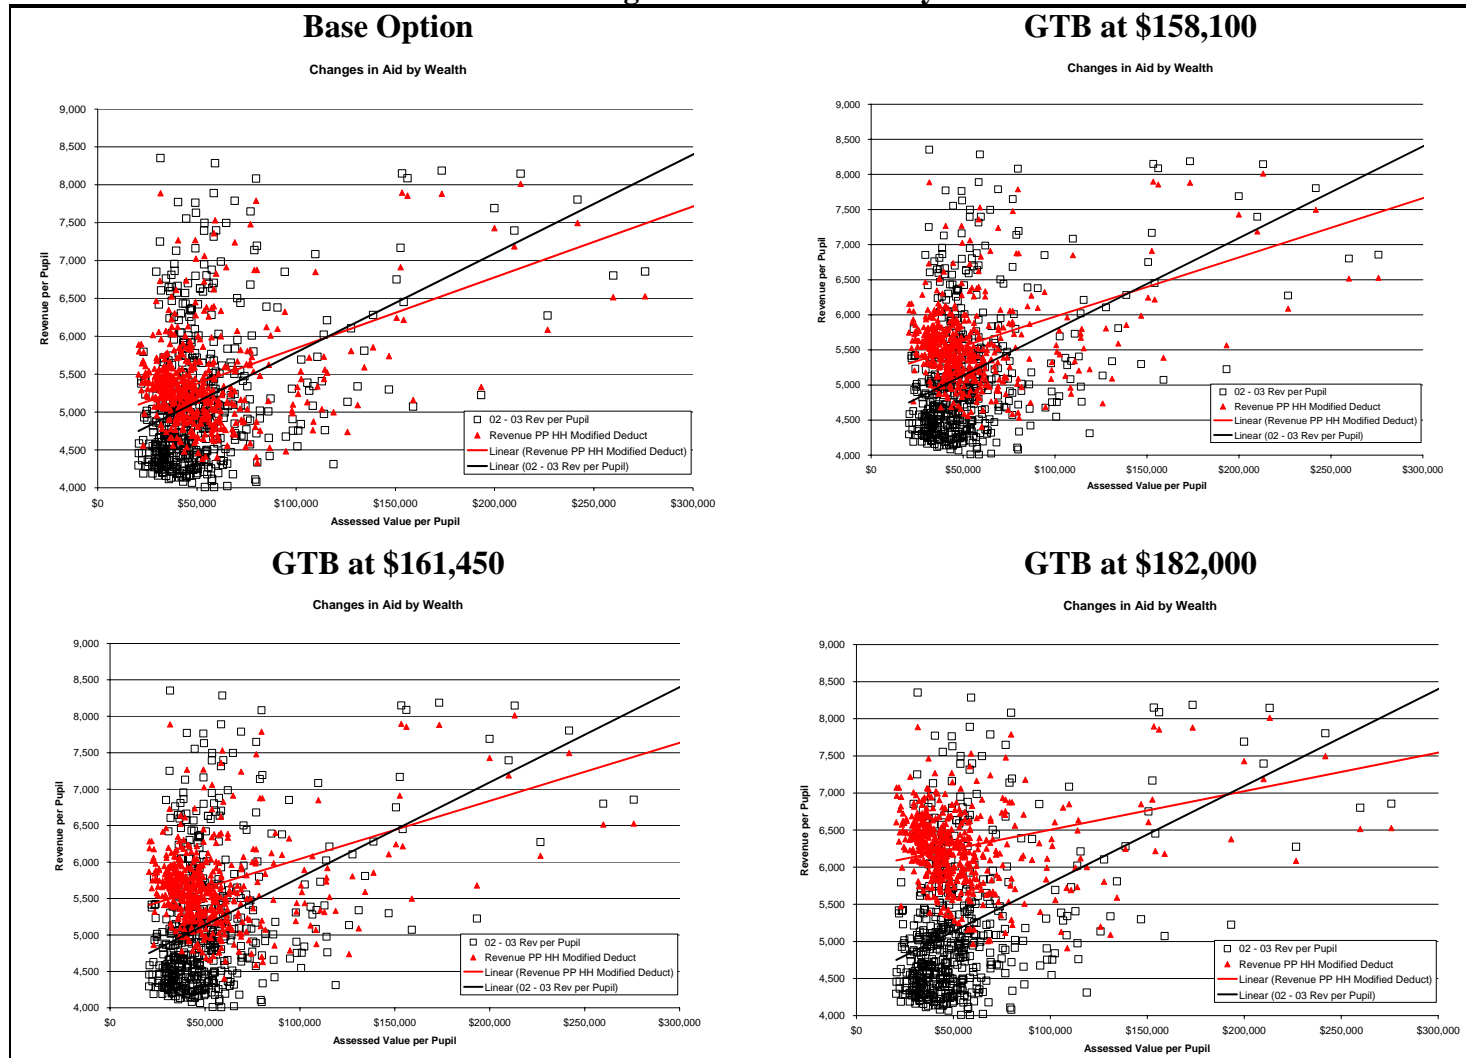

Table 3 displays the equity output from our four options. The base proposal produces some improvements to equity compared with current (2002–03) conditions. Mean revenues are raised from \$5,570 to \$5,648. The coefficient of variation is reduced from about 21percent to 17 percent. Other indicators similarly improve.

**Table 3**  
**Changes to Equity Under Options**

<b>EQUITY OUTPUT</b>	<b>[a]</b> <b>Base Proposal</b>	<b>[f]</b> <b>Add 100 Million</b>	<b>[g]</b> <b>Add 150 Million</b>	<b>[h]</b> <b>Add 500 Million</b>

Figure 2 provides a graphic display of the changes in revenue per pupil with respect to property wealth per pupil. As depicted in Figure 1, the proposal *lifts* the revenues per pupil of the lowest property wealth districts. Each additional increase to the guaranteed tax base further lifts those districts.

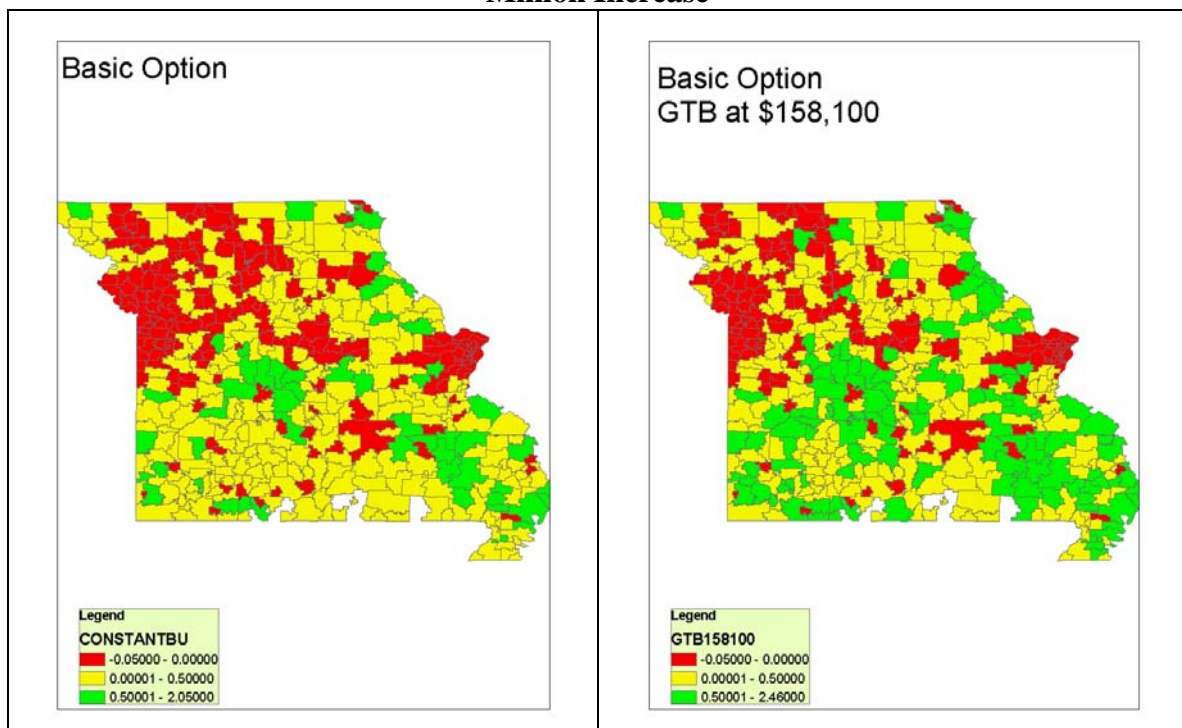

**Figure 2**  
**Changes to Fiscal Neutrality**

## 5.0 District Level Effects

Figure 3 displays geographically, the winners and losers under our basic option (GTB at \$151,200) and under the option with \$100 million added into the GTB. In general, metropolitan areas are disadvantaged by our plan to reduce matching aid on tax rates above the \$2.75 rate. That said, it is generally southern and southeastern Missouri rural areas and small towns that fair least well under the current formula, due to the relatively low assessed valuation per pupil. Under the basic option, most of rural southern Missouri would see state aid increases up to 50 percent, and many would receive state aid increases in excess of 50 percent (brighter green). In general, adding funding to the “foundation level” or GTB provides further benefit for rural southern Missouri. Unlike Option Package 1, which reinstates matching aid above the \$2.75 rate, additional aid into the GTB does not stem the erosion of state revenues in metropolitan areas.

**Figure 3**  
**Districts with Gains (Yellow to Green) and Losses (5%) GTB Option with \$100 Million Increase**
